PROFESSIONAL SUMMARY

Full-stack developer and computer science graduate with 4+ years of experience building web applications and computer vision systems. Works across React, Next.js, TypeScript, Node.js, Python and MongoDB, with hands-on experience developing REST APIs, authentication, real-time video analysis, face recognition and object detection. Has delivered learning platforms, attendance systems and security-focused vision tools.

TECHNICAL SKILLS

Programming: JavaScript, TypeScript, Python, C++, SQL, HTML5, CSS3

Frontend: React.js, Next.js (App Router), Redux, Tailwind CSS, Framer Motion, responsive UI implementation

Backend: Node.js, Express.js, FastAPI, REST APIs, JWT authentication, role-based access control, WebSockets, server-side rendering

Databases: MongoDB, Mongoose, MySQL, schema design, aggregation pipelines

Computer Vision: OpenCV, MediaPipe, InsightFace, YOLOv8, face detection and recognition, liveness detection, object detection and tracking, pose estimation, hand tracking, video analytics

Machine Learning: PyTorch, scikit-learn, CNNs, KNN, face embeddings, dataset preparation, model evaluation

Tools: Git, GitHub, Docker, Linux, Postman, Vercel, Agile/Scrum, code review, debugging, performance optimization

PROFESSIONAL EXPERIENCE

Computer Vision Developer

Rahanet IT Company | Herat, Afghanistan | Nov 2024 – Sep 2025

- Developed Python computer vision features with OpenCV and YOLO for surveillance, monitoring and analytics.
- Built face-recognition and object-detection pipelines to identify and track people and vehicles in live video streams.
- Implemented people- and vehicle-counting modules that automated reporting from continuous camera feeds.
- Optimized detection models and frame-processing loops for reliable operation on resource-constrained hardware.
- Connected vision modules to backend services and web dashboards for reviewing alerts, screenshots and reports.

Web Developer

Wassa Company | Herat, Afghanistan | Oct 2023 – Jul 2024

- Built responsive, cross-browser interfaces using HTML, CSS, JavaScript and React.
- Implemented backend functionality and integrated internal and third-party REST APIs.
- Improved page performance and accessibility through refactoring and reusable components.
- Worked with design and QA teammates to deliver features against project requirements and deadlines.

MERN Stack Web Developer

Farsrout Company | Herat, Afghanistan | Feb 2022 – Aug 2023

- Developed full-stack web applications using MongoDB, Express.js, React and Node.js.
- Designed REST APIs and implemented JWT authentication and role-based access control.
- Improved maintainability through refactoring, code reviews and reusable component patterns.
- Collaborated with remote teammates using Git and GitHub.

SELECTED PROJECTS

Real-Time Face Recognition Attendance System

Technologies: Next.js, TypeScript, Python, FastAPI, InsightFace, OpenCV, MongoDB

- Built an attendance platform that recognizes faces from live camera feeds and records attendance automatically.
- Developed a Python recognition service using InsightFace embeddings and REST endpoints for a Next.js dashboard.
- Implemented role-based management for multiple users and organizational branches.

Intrusion Detection System

Technologies: Python, YOLO, OpenCV, NumPy

- Built a zone-based detection tool that allows operators to draw restricted areas on live video.
- Added real-time alerts and screenshot capture when detected people entered restricted zones.

Real-Time Face Liveness Detection

Technologies:

Learning Management System

Technologies: Next.js, TypeScript, MongoDB, Node.js, Tailwind CSS, JWT

- Built separate dashboards for administrators, instructors and students.
- Implemented course creation, enrollment, progress tracking, protected routes and server-side rendering.

Real-Time Basketball Analysis

Technologies: Python, YOLOv8, OpenCV, object tracking

- Detected and tracked players and the ball in match footage, with movement trajectories and video annotations.

AI Interview Platform

Technologies: Next.js, TypeScript, Node.js, MongoDB, AI APIs

- Developed an interview practice platform with AI-generated questions, structured feedback, authentication and per-user interview history.

ADDITIONAL PROJECTS

- Computer vision utilities: face anonymization, real-time hand tracking, full-body pose estimation and KNN-based face-recognition attendance logging.
- MERN e-commerce application: product catalog, cart, checkout flow and admin product management.
- Movie streaming website: movie catalog with search, genre filtering and title detail pages.
- Other web applications: doctor appointment system, real estate platform and developer portfolio.

EDUCATION

Bachelor of Science in Computer Science | Ghalib University, Herat, Afghanistan | 2020–2024

- Relevant coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Systems, Software Engineering, Operating Systems and Artificial Intelligence.

CERTIFICATION

MERN Stack Development Certification – Wassa (2023)
